

MISSION STATEMENT

The NeuroEndocrineImmune (NEI) Center™ is a community, patient-driven grass roots project of P.A.N.D.O.R.A. in partnership with the Lanford Foundation–Lifelyme, Inc. It will be the first research center to incorporate biomedical engineering, scientific, and clinical research and integrate patient computer-aided disease diagnosis and treatment (CADDT), which was specifically designed for multisystem illnesses and complex diseases. Guided by medical scientists and clinical researchers, with pertinent social services, the center staff will enhance the quality of life for millions of patients worldwide. The Center and its satellite locations will strive to facilitate cooperative and authoritative educational resources in clinical research, medical ethics, accountability, and patient/caregiver education, with the goal of providing new, integrated treatment programs for complex chronic illnesses.

The cornerstone of the NEI Center™ is that discoveries and advances made in any one of the neuroendocrineimmune illnesses: chronic fatigue syndrome (CFS), myalgic encephalomyelitis or encephalopathy (ME), fibromyalgia (FM), Gulf War syndrome/illness (GWS/GWI), multiple chemical sensitivity (MCS), environmental illness (EI), chronic or persistent Lyme disease (CLD-PLD), Alzheimer's Disease (AD), and autism, will be applicable and beneficial to other neuroendocrineimmune illnesses, thereby bringing us closer to a cure.
